See How LeaFree™ Keeps Your Gutters Clog-Free!

LeaFree™ works on the scientific principle of water adhesion. The patent pending design allows water to enter the gutter while keeping leaves and debris out. The design allows LeaFree™ to be custom-fit to any home by adjusting to any roof pitch. The 1/2 inch horizontal opening is ideal to handle the heaviest rains and keep debris out. This opening also keeps birds and other pests from entering the system. LeaFree™ has a low profile design that beautifies the look of your home by blending your gutters with the shingles and hiding unsightly metal flashing. It will add to the curb appeal and overall value of your home.
